Prevention

A universal wellbeing offer enabling older people to manage their own health and wellbeing, based in local communities and utilising local resources. It will address the issues that lead to older people entering into formal health and care systems, such as social isolation, falls and carer breakdown. Access to good quality information and advice will be the cornerstone of our wellbeing offer, enabling people to identify and access the support that they need in order to maintain living fulfilled lives.

Early Intervention

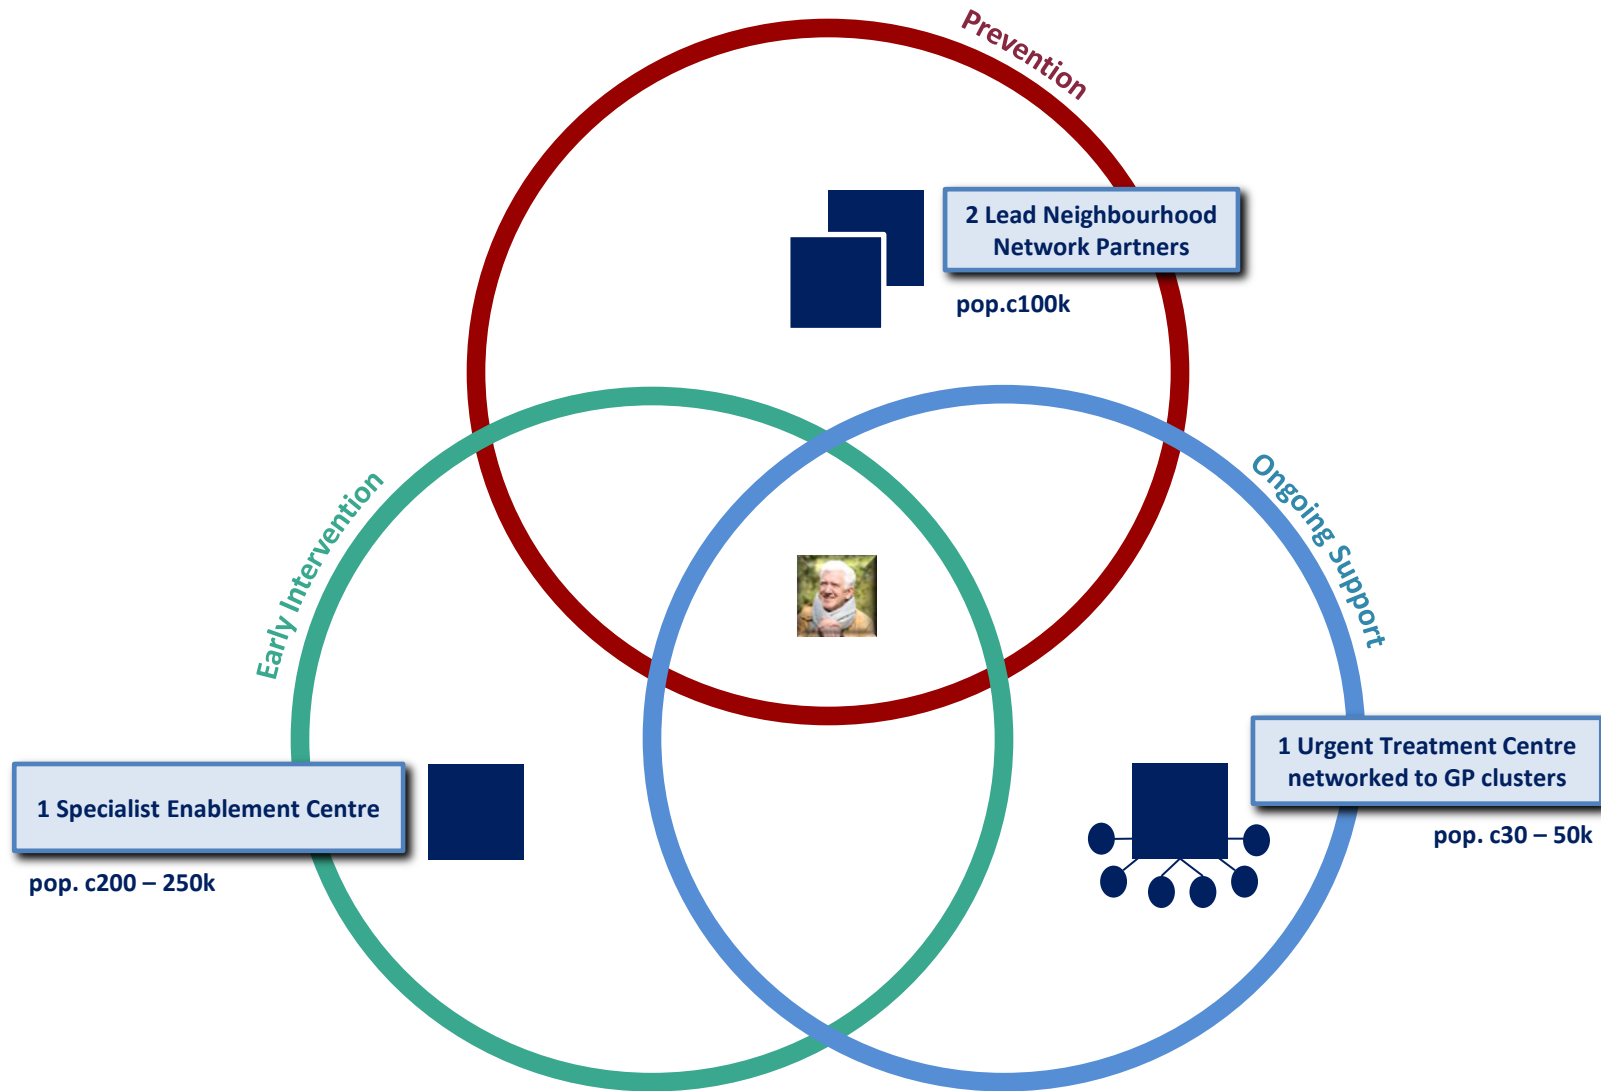

A range of targeted interventions to promote faster recovery from illness or injury, prevent unnecessary hospital admission and premature admission to long-term residential care, support timely discharge from hospital and maximise independent living. We will respond quickly, minimise delays and not make decisions about long term care in a hospital setting.

Ongoing Support

Some older people will need ongoing support to remain living in their own homes and communities. These services aim to maintain individual wellbeing and self-sufficiency, keep older people safe and enable them to be treated with dignity, stay connected to their communities and avoid unnecessary admissions to hospitals or care homes. We will change the way our services are commissioned and delivered to be more focused on achieving better outcomes for older people.
