

Title of proposed EIA	Birmingham Clean Air Zone submission of FBC and request proceed with implementation
Reference No	EQUA210
EA is in support of	New Function
Review Frequency	Annually
Date of first review	01/12/2021
Directorate	Inclusive Growth
Division	Transport and Connectivity
Service Area	Clean Air Zone Team
Responsible Officer(s)	■ Naomi R Coleman
Quality Control Officer(s)	■ Janet L Hinks
Accountable Officer(s)	■ Stephen Arnold
Purpose of proposal	To proceed with implementation of Birmingham Clean Air Zone, aligned to the Full Business Case
Data sources	Survey(s); Consultation Results; Interviews; relevant reports/strategies; Statistical Database (please specify); relevant research; Other (please specify)
Please include any other sources of data	Distributional Impact Appraisal (DIA), Health Impact Assessment (HIA)
ASSESS THE IMPACT AGAINST THE PROTECTED CHARACTERISTICS	
Protected characteristic: Age	Service Users / Stakeholders; Employees; Wider Community
Age details:	<p>Children, young people and the elderly can be more vulnerable to air pollution and would be more likely adversely affected by any reduction in the availability of community transport servicing schools and community centres within the CAZ. Self evidently such groups are more reliant on public transport than the general population. They could also be adversely affected by the increased cost of community transport particularly if this prevented them accessing schools and community centres within the CAZ, if it prevented families of patients at Birmingham Children's Hospital from visiting them during their stay.</p> <p>A high proportion of elderly people have limited mobility and therefore could be adversely affected by implementation of the CAZ if it were to result in the reduction in availability of community transport and taxis, and also the potential increase in cost of community transport and private vehicle travel.</p> <p>A Defra commissioned study in 2006 showed that there is a tendency for higher relative mean annual concentrations of NO₂ and PM10 in the most deprived areas of the country. In areas which exceed emissions standards, the correlation is stronger. The most vulnerable human receptors include young people and the elderly. A report published by the Royal College of Physicians finds that children living in high pollution areas are four times more likely to have reduced lung function when they become adults (Royal College of Physicians, 2016.).</p>

The entire CAZ has a very low proportion of people over the age of 65 by LSOA relative to distribution across England and Wales and there is no variation in the proportion of people over the age of 65 within the CAZ. The areas with greater proportions of elderly people are in the Sutton Coldfield area in the northern part of Birmingham and the Northfield/Selly Oak areas to the south. This suggests that the elderly population is unlikely to be disproportionately affected by changes incurred within the CAZ.

Where transport is not provided by the school or local authority, then there could be a differential adverse impact on children attending special educational needs schools if the introduction of the CAZ discourages or prevents families from accessing these schools. However, based on School Travel Plan monitoring within the CAZ area the level of trips to school by non-car modes is generally quite high.

There are also several community centres within the CAZ that have been identified as providing services used principally by children and which may require transport to and from the premises. These include St Martin's Youth Centre and community centres associated with schools in the CAZ area such as Al-Rasool School and St George's Academy.

Community transport vehicles are typically older and liable to incur the CAZ charge. As community centres are typically funded either partially or fully by charitable donations, they are unlikely to have sufficient cash reserves to upgrade to a compliant vehicle. Therefore, they may have to either increase the cost or reduce the availability of their travel services as a result of the CAZ charge. This would have a differential adverse impact on children using these services.

BCC Procurement contracts for SEN and Community transport specify the requirement for CAZ compliant vehicles no sooner than July 2020.

However, where Community and School transport is registered as section 19 or section 22 for operation in Birmingham and not registered as a Hackney Carriage or Private Hire Vehicle they will be exempt from the CAZ charges for 1 year.

Birmingham Licensed taxis that undertake BCC SEN and Community transport services or any other BCC transport contracts are excluded from exemption, as they are already required to be CAZ compliant from January 2020 in order to meet the Birmingham Licensing Authority policy criteria. Likewise, any other external Local Authority licensed taxi vehicle used to service a contract procured by BCC to deliver SEN and Community Transport (whether section 19 or otherwise) would need to meet CAZ compliance standards of Euro 6 diesel or Euro 4 petrol as a minimum.

All facilities of importance within the air quality modelling area for the preferred CAZ option would experience a decrease in NO₂ concentrations to some degree. The degree of increase or decrease in NO₂ concentrations has been modelled to show impacts following implementation of the preferred CAZ option relative to locations of facilities of importance to children as described above. The greatest

Protected characteristic: Disability

Disability details:

decreases in average NO₂ concentrations are generally seen within the CAZ areas itself and surrounding major arterial roads as they extend out of the CAZ, which is also where average NO₂ concentrations are highest under the Do Minimum scenario.

By introducing exemptions, the residual effect is anticipated to be neutral as affected vehicles would be exempted.

Service Users / Stakeholders; Employees; Wider Community

The presence of a higher disability ratio may indicate a high proportion of people sensitive to air quality due to some long term illnesses (especially respiratory). The disabled are also more likely to have concerns over personal security, i.e. more reluctant to travel via taxi or public transport and will therefore be more heavily reliant on private transport.

The CAZ includes areas where there are a high proportion of disabled residents based on the comparative illness and disability ratio component of the Index of Multiple Deprivation. The central north section as well as the southern west part of the CAZ includes the highest proportion of disabled residents in the CAZ. There is only a small section within the centre with a low proportion of disabled residents.

The 2011 Census reported that 9% of the population of Birmingham (98,181 people) reported a long term health problem or disability that was significantly limiting their day-to-day activities. A similar percentage of the population reported their day-to-day activities were slightly limited by health problem or disability. The official labour market statistics state that the total number of people claiming disability living allowance in Birmingham is 43,920 (approximately 4% of the population).

The population of the young, the old and disabled exhibit a higher proportion of persons who are more sensitive to poor AQ. AQ are known to be more sensitive to poor air quality and the implementation of the Clean Air Zone will have positive impacts for those in the CAZ area and the wider city.

There are a number of exemptions and mitigations which will be available to support disabled people who live or need to travel into the Clean Air Zone and who would be adversely affected by the charges. These will be specifically targeted towards CAZ residents, low income groups and those visiting specified medical facilities.

Vans and mini buses registered as providing essential community and school transport services and those classified as section 19 or section 22 operators in Birmingham will also be exempt for 1 year from the date of CAZ implementation.

The reliance on Wheelchair Accessible Hackney Carriages is also noted and proposals to support the uptake of compliant models of these vehicles is also proposed to ensure the continued availability of this service.

Vehicles within the disabled passenger vehicle tax class will be exempt from paying a charge in a Clean Air Zone. As noted, vehicles registered as providing essential community

<p>Protected characteristic: Sex</p> <p>Gender details:</p>	<p>and school transport classified as section 19/22 operators in Birmingham will also be exempt for 1 year from the date of CAZ implementation.</p> <p>Service Users / Stakeholders; Employees; Wider Community</p> <p>There is a very low proportion of female residents throughout the majority of the CAZ. There is a higher proportion of female residents in a small section in the southern part of the CAZ (Digbeth area) and one area, north east of the centre which includes a high proportion of female residents. This is in the vicinity of the Birmingham Children's Hospital and the high proportion of female residents is assumed to be due to the presence of key worker accommodation on the hospital site. Much of the remaining CAZ area has a low proportion of female residents by LSOA relative to distribution across England and Wales.</p> <p>Notwithstanding the above, the DIA has identified that there could be a disproportionate and differential impact on women, who as a group are more frequent users of taxis and have a more negative perception or experience of alternative modes of public transport and active travel modes (walking and cycling).</p> <p>Specific mitigation measures are not being proposed on the basis of gender. However a number of the mitigation measures being proposed will serve an indirect benefit to women; the mitigation for taxis, PHV etc would help mitigate potential impacts on women by maintaining availability of taxis and PHV. Also, exemptions for CAZ workers likely to benefit women, who are disproportionately represented in these roles (nursing, care workers etc).</p>
<p>Protected characteristics: Gender Reassignment</p> <p>Gender reassignment details:</p>	<p>Service Users / Stakeholders; Employees; Wider Community</p> <p>The DIA notes that "There are potential differential impacts on security [in relation to people with gender reassignment as a consequence of some public attitudes which may affect transport preferences. However, the scale of this issue is not known and based on anecdotal evidence."</p> <p>It was difficult to find sufficient evidence or studies to provide robust research on this. However it is considered that people with this protected characteristic are more likely to experience, or be concerned about, antisocial behaviour or hostility towards them which may influence whether they are comfortable using public transport or would be more likely to use taxis or own vehicles.</p> <p>By assumption, therefore, any reduction in PHV and taxis may adversely affect people with this protected characteristic, so the mitigation measures to support the PHV and taxis are beneficial to gender reassignment by helping to ensure that people do not leave the taxi and PHV businesses, therefore ensuring the continued availability of this form of transport for people who do not feel safe using public transport.</p>
<p>Protected characteristics: Marriage and Civil Partnership</p> <p>Marriage and civil partnership details:</p>	<p>Not Applicable</p>

	<p>It is not considered that the introduction of a CAZ will negatively impact individuals who are married or in a civil partnership.</p>
Protected characteristics: Pregnancy and Maternity	Service Users / Stakeholders; Employees; Wider Community
Pregnancy and maternity details:	<p>There are health inequalities associated with pregnancy and air quality. The DIA notes that there is emerging evidence on the links between high levels of emissions and effects on the unborn child. Evidence shows that air pollution can affect the growth of the unborn baby and may be linked to premature birth or even still birth. It is estimated that traffic-related air pollution exposure (particularly exposure to PM) of pregnant women accounts for more than one-fifth of all cases of low birth weight at term. Low birth weight is associated with low lung function, COPD, cardiovascular disease and early death in adulthood. Air pollution can also harm placental development, which affects the development of the unborn child and has been associated with several chronic diseases including heart disease, obesity and type 2 diabetes. Poor foetal growth is linked to abnormal development of the kidneys, and to hypertension and kidney disease in later life.</p> <p>It is thought that the introduction of a Clean Air Zone will have a positive impact to pregnant women and those on maternity leave with small children.</p> <p>A specific mitigation measure is not proposed for this group; however, it is noted that there are potential impacts related to accessibility to key facilities e.g. the Children's Hospital and a specific mitigation measures to support visitors and patients are proposed.</p>
Protected characteristics: Race	Service Users / Stakeholders; Employees; Wider Community
Race details:	<p>Compared to England and Wales, much of Birmingham has a high proportion of its population that identifies as Black, Asian and Minority Ethnic (BAME). There is a generally high concentration of Birmingham's BAME population to be found in the central part of Birmingham, with the highest concentrations to the east (Hockley, Winson Green and Handsworth areas) and west of the CAZ (Sparkbrook, Small Heath and Bordesley Green areas). The areas with the lowest proportion of BAME population are the Sutton Coldfield area in the northern part of Birmingham and the Northfield/Selly Oak areas to the south, but these still comprise populations in the top 40% proportion of BAME population compared to England and Wales as a whole.</p> <p>There are however high proportions of LSOAs within the CAZ with high levels of income deprivation and BAME communities. Key issues are therefore likely to relate to travel within the CAZ and the proportion of residents within the CAZ that have non-compliant vehicles who would not be able to avoid the zone.</p> <p>The DIA notes that the impact on the taxi trade could have consequential impacts for BAME and low income communities, since a very high proportion of taxi drivers are from communities with a high proportion of non-white residents and income deprived residents. Since taxis in</p>

Birmingham are all wheelchair accessible, whereas currently none of the private hire taxis are, a reduction in this type of vehicle will have an adverse impact on disabled people who may depend on them for access.

As such, a number of mitigation measures being proposed are targeted at providing support for drivers of both Hackn Carriages and Private Hire Vehicles as detailed in the initial Equality Impact Assessment below.

There would be an overall beneficial health impact within the study area under the preferred CAZ option and all other options, however, the magnitude of benefit would be greatest under the preferred CAZ option. When income distribution is considered relative to England and Wales, residents of those LSOAs which fall within quintile one for income deprivation would experience a disproportionately greater amount of the benefits associated with reductions in atmospheric concentrations of all three pollutant types (NO₂, PM₁₀ and PM_{2.5}) than those within less deprived quintiles.

Protected characteristics: Religion or Beliefs

Religion or beliefs details:

Service Users / Stakeholders; Employees; Wider Community

According to the 2011 census, Christianity was the highest represented religion in Birmingham with 46% of residents saying they were Christian. Whilst 22% of the population were Muslim and 19% had no religious beliefs.

The majority of people classifying themselves in one of the White or Black ethnic groups said that they were Christian, whereas the Muslim community was predominantly made up from the Asian population. In general, the Muslim population are concentrated closer to the city centre area with the Christian group generally further out towards the council boundary.

Within the proposed CAZ area there are 30 registered places of worship, including Roman Catholic, Presbyterian, Church of England, Greek Orthodox Churches, Synagogues, Mosques and Sikh Temples. Most are of a size that suggests their catchment is highly localised. However, Birmingham Central Mosque is an exception with a capacity of 20,000 and regularly attracts more than 4,000 worshippers for Friday services, suggesting that it attracts a significant number of visits from outside the CAZ area on a regular basis. Other places of worship with a significantly larger than average capacity (greater than 500 spaces) within the CAZ area include the Anglican, Greek Orthodox and Catholic Cathedrals, Camp Hill Seventh Day Church, Ladywood Seventh Day Adventist Church and Birmingham City Church.

The DIA includes an analysis of the distribution of different faith populations across Birmingham. This did not indicate any pronounced issues regarding the distribution of populations and the CAZ. Therefore the analysis looked more closely at the location of large places of worship that would require people to travel across the CAZ boundary.

Mitigation measures are not being proposed specifically for faith groups as there is no direct correlation between religion and ability to comply with the requirements of the Clean Air Zone.

Protected characteristics: Sexual Orientation

Sexual orientation details:

Further measures to work with faith and community groups on travel planning is also included within the proposed mitigations.

Not Applicable

It is not considered that the CAZ scheme is likely to disadvantage individuals based on their sexual orientation.

However, similar to gender reassignment, any reduction in PHV and taxis may adversely affect people with this protect characteristic, so the mitigation measures to support the PHV and taxis are beneficial by helping to ensure that people do not leave the taxi and PHV businesses, therefore ensuring the continued availability of this form of transport for people who do not feel safe using public transport.

Socio-economic impacts

Please indicate any actions arising from completing this screening exercise.

The mitigations and exemption packages are detailed in the Initial Equality Impact assessment below.

Please indicate whether a full impact assessment is recommended

YES

What data has been collected to facilitate the assessment of this policy/proposal?

A Distributional Impact Appraisal and a Health Impact Assessment were completed as detailed in the Initial Equality Impact Assessment below. The attached document should be read together with this EIA.

Consultation analysis

A public consultation on the Clean Air Zone proposals was launched on Wednesday 4th July 2018 and ran for 6 weeks until Friday 17th August 2018.

The consultation questionnaire asked for details about the respondents so we would be able to know how well people with each protected characteristic were represented among the respondents. The consultation report (published as part of the report to Cabinet on September 10th 2018) provided an overview of the overall demographics of those who responded compared to the general population. This suggested favourable levels of engagement from different communities across the city.

The aim of the consultation process was to seek feedback from individuals and organisations on the proposals for a Class D Clean Air Zone (CAZ) for Birmingham. Specifically identifying:

- Feedback and thoughts on all aspects of the CAZ proposals (including the principle of the proposals);
- Develop a better understanding of the impact that the proposals would have on individuals and organisations;
- What support/mitigation is needed for particular groups of people/organisations; and
- Suggestions for any further measures which were not included.

A programme of engagement which has taken place during 2019 is shown below.

Date	Event	Background	Event type
20/6/2019			

	Clean Air Day event at Birmingham Cathedral	Market-place event in St. Philip's Cathedral grounds, Colmore Row. BCC stall to present communities with Clean Air Zone Information.	Community fair
Sunday 19 August 2018	Lord Mayor's Show	Information stand at Cannon Hill Park with 2 volunteers. spoke to 95 individuals, main interest checking vehicle registrations.	Community Engagement
Saturday 25th, Sunday 26th May 2019	Birmingham Pride	Stand held at Birmingham Pride to give people information and guidance on the Clean Air Zone and how to prepare	Community Engagement
Sunday 28th July 2019	Big John's Mela	Stand held at Big John's community mela event to give people information and guidance on the Clean Air Zone	Community Engagement
02/05/2019	CAZ Business Event	Series of events for businesses and organisation to find out latest information about the CAZ and additional support available to them to prepare.	Business Engagement
04/06/2019	CAZ Business Event	-	Business Engagement
18/06/2019	CAZ Business Event	-	Business Engagement

02/07/2019	CAZ Business Event	-	Business Engagement
21/06/2019	Shabana Mahmood MP visit	Nelson Primary School	Community Engagement
05/07/2019	Shabana Mahmood MP visit	Chandos Primary School	Community Engagement
12/07/2019	Shabana Mahmood MP visit	Drop-in St Matthew's CE Primary School	Community Engagement
19/07/2019	Shabana Mahmood MP visit	St Luke's Church	Community Engagement
02/10/2019	Chamber of commerce breakfast briefing	Chamber of Commerce breakfast briefing to member about developments within Brum Breathes. Specifically, the CAZ. Presentations by Cllr Zaffar and Steve Arnold.	Business Engagement
10/10/2019	Fleet operators and HGV's Clean Air Roadshow	Motor Transport is hosting a second Birmingham Clean Air Roadshow on 10 October to provide vital information and support to HGV and van operators ahead of the city's Clean Air Zone rollout by July 2020.	Business Engagement
21/11/2019	Sandwell workshop	Working together with Sandwell to address air quality and understand	Business Engagement

		the impact of the work we are delivering and the changes we are making, with particular reference to air quality hotspots. Agenda includes a presentation on the Sandwell Change and Air Quality Action Plan and also an update from Birmingham on Air Quality Monitoring and Evaluation.	
22/10/2019	West Midlands Transport Conference		Business Engagement
23/10/2019	World Air Quality Conference 2019	World Air Quality conference at London City Hall	Business Engagement
24/10/2019	TOA taxis chairman meeting	Meeting with chairman of TOA taxis to discuss concerns and forward planning of support packages for the taxi community	Business Engagement
24/10/2019	City centre strategy board	Presentation of CAZ plans at the next City Centre strategy board	Business Engagement
26/10/2019	Birmingham Hebrew Congregation presentation	Presentation and briefing at Birmingham Hebrew Congregation to the community about Brum Breathes and the Clean Air Zone plans	Community Engagement
05/11/2019			

	Members marketplace	An opportunity to share information about the CAZ - next steps etc.	Community Engagement
06/11/2019	Economy and Skills committee	Steve to present support for businesses package at committee	Briefing event
11/11/2019	Birmingham Advanced Motorists	CAZ presentation	Community Engagement
20/11/2019	Birchfield Ward meeting		Community Engagement
02/12/2019	Budget consultation - business rate payers		Community Engagement
18/12/2019	Public Budget consultation		Community Engagement

Adverse impact on any people with protected characteristics.

As detailed within each characteristic analysis.

Could the policy/proposal be modified to reduce or eliminate any adverse impact?

The mitigations and exemption packages are detailed in the Initial Equality Impact assessment below.

How will the effect(s) of this policy/proposal on equality be monitored?

The City Council propose to undertake some qualitative monitoring and evaluation of travel behaviours to understand the impacts of the mitigation measures and exemptions as help to interpret and explain the findings from the travel monitoring and air quality. The proposed method for doing so is by commissioning a consultant, research group or university team via a competitive tendering process to undertake a Cohort Study. The Cohort Study would recruit through targeted sampling of people eligible for the mitigation measures and exemptions as well as some general population sampling to assess the impact of the CAZ on different groups, and provide a comparison to understand the additional impact that the mitigation and exemption measures have on travel behaviour.

What data is required in the future?

To be determined by the Cohort Study as detailed above.

Are there any adverse impacts on any particular group(s)?

Yes

If yes, please explain your reasons for going ahead.

As detailed in the Initial Equality Impact Assessment below.

Initial equality impact assessment of your proposal

Birmingham City Council has a duty under S149 of the Equality Act to pay due regard to the need to eliminate discrimination, harassment and victimisation and to ensure equality of opportunity to those who share a protected characteristic and those who don't. Additionally the City Council has a duty to foster good relations between persons.

who share relevant protected characteristics and those who don't. The authority must give proper regard to all the goods in Section 149 of the Equalities Act in the context of the function that it is exercising, and at the same time, pay regard to any countervailing factors which, in the context of the function being exercised, it is proper and reasonable for the authority to consider.

As such, Birmingham City Council has commissioned a distributional impact appraisal, together with a health impact assessment, to identify how the impacts of a proposed Clean Air Zone (CAZ) would be distributed across Birmingham's diverse population and business communities. These impacts include positive health benefits as well as financial impacts. The outputs of this work together with responses received as part of the consultation have been used to develop a package of measures to reduce the impact on individuals and businesses most likely to be adversely impacted by the Clean Air Zone proposals.

Social and Equality Impacts

Income deprivation has been considered at lower super output level (LSOA)¹ relative to England and Wales, and relative to Birmingham. Compared to England and Wales as a whole, there are high levels of income deprivation within the CAZ and Birmingham in general. Owners of non-compliant vehicles resident within the CAZ and in close proximity to the CAZ (such as Nechells, Aston, Perry Barr, Tyburn, Soho and Sparkbrook) are potentially the worst affected financially by the proposed scheme, as due to their geographical location they would be least able to avoid entering and exiting the CAZ for everyday car journeys. There is a higher rate of non-compliant cars associated with areas of income deprivation. It should also be noted that there is a relatively high proportion of households within the CAZ that have no access to a car. The adverse impacts therefore would be distributed amongst those households that are dependent on car use and who have non-compliant vehicles. It is notable that low income households across Birmingham are also among those who would benefit most from the effects of the CAZ in terms of reduced journey times and reduced petrol consumption due to reduced congestion around the city centre as well as from the health benefits of the proposed scheme.

Other social groups potentially adversely affected by the Clean Air Zone proposals would be those dependent on community transport and taxis, as without mitigation these forms of transport could be adversely affected to the extent that their availability decreases (see below). People vulnerable to the impacts would include the disabled, the elderly, women and children. There are some key community facilities within the CAZ whose users could be adversely affected by the combination of CAZ charges and parking charges. Examples include staff and families of children who are patients of the Birmingham Children's Hospital, and congregants of the larger or more unique places of worship within the CAZ. Exemption will be offered to visitors of select medical facilities within the CAZ however it is not possible to provide

mitigation to cover all key community facilities with adversely affecting the rate of achieving compliance. Visits to community facilities are not provided for under the package of mitigation measures and exemptions therefore individuals will be required to plan their travel appropriately.

Business Impacts

The analysis has shown that some transport dependent businesses are more likely to have compliant fleets than others and so the impact of the CAZ would be distributed unequally across businesses. Taxi businesses would be faced with high upfront costs and few choices of response to the CAZ. Other types of business less able to afford the impact of the CAZ appear to be private hire taxi companies, van companies with fleets that are owned by individuals rather than registered to the company, and SME HGV operators. A very high proportion of businesses within the CAZ are SMEs. Since all would be dependent on transport to some extent, any increase in costs from their suppliers as a result of entering the CAZ are likely to be passed on to the customers, businesses, who in general would have less capacity to cope with increased costs than larger businesses. A number of the mitigation measures and exemptions are targeted at SMEs, Commercial Vehicle Fleets, taxis and private hire taxi companies to ensure that they are catered for and the impact is minimised.

Health Impacts

Health impacts would result from the reduction in pollutants (particularly NO₂ and fine particles (PM10 and PM2.5)) as well as behavioural changes from switching to active modes of transport (walking and cycling) and improved environmental conditions. Analysis has shown that more deprived communities would proportionately receive high health benefits than the population as a whole, meaning that the CAZ would help address a health inequality associated with the more deprived communities typically being exposed to more air pollution. Spatial analysis of where the main quality changes would occur have shown that there would be a 26% improvement in NO₂ pollution concentrations around schools and nurseries which are currently within the areas of greater risk of illegal levels of air pollution.

One of the aims of the CAZ is to nudge behavioural change so that people use more active modes of travel where they can. Although it is not possible to quantify the likely level of change of the CAZ, across a population the increase in physical activity could contribute to significant improvement in overall public health.

Mitigation

The City Council has paid due regard to the need to achieve the goals set out in the Equalities Act (see above), and where

there is risk of an adverse impact to a protective group, it has been identified and considered in the development of mitigation measures and exemptions. A targeted package of mitigation measures and exemptions has been developed to ensure that those impacted are catered for where possible and that the City Council's duties under the Equality Act 2010 are fulfilled. The mitigation measures and exemptions are set out below.

Mitigation Measures:

- M1a - CAZ workers earning less than 30k pa. Scrappage scheme and/or mobility credit.
- M2a - Hackney carriage support package;
- M2b - Council Hackney Carriage rental scheme;
- M2c - Private hire vehicle upgrade support;
- M4 - HGV & Coach compliance fund;
- M5 - Marketing and engagement campaign.

Exemptions:

- Commercial vehicles registered within the CAZ will receive a 1 year exemption from date of CAZ commencement (max 2 vehicles per company);
- Commercial vehicles with a pre-existing finance agreement beyond 2020 registered within the CAZ will receive 1 year exemption from date of CAZ commencement (max 2 vehicles per company);
- Residents of the CAZ - Individuals with non-compliant vehicles registered in the CAZ will be exempted for 2 years from date of CAZ commencement;
- Individuals with a non-complicant vehicle travelling into the CAZ regularly for work and earning less than £30k pa will be exempt upon successful application for 1 year from date of CAZ commencement;
- Visitors to select medical facilities within the CAZ will be exempt for the duration of their stay within 1 year from date of CAZ commencement; and
- Vans and mini buses registered as providing essential community and school transport services and those classified as section 19/22 operators in Birmingham will be exempt for 1 year from date of CAZ commencement.
- Vehicles with disabled passenger tax class.
- Specialist Vehicles (Emergency Service Vehicles, Historic Vehicles, Military Vehicles, Agricultural or Similar Vehicles, Recovery Vehicles, Showman's Vehicles, Special Vehicles)

Temporary Non-Chargeables:

- Taxis awaiting retrofit.
- Commercial Vehicles awaiting retrofit.

Consulted People or Groups

As detailed under Consultation Analysis

Informed People or Groups

As detailed under Consultation Analysis

Summary and evidence of findings from your EIA

The impacts of introducing a Clean Air Zone include positive health benefits as well as financial impacts. Financial impacts are two-fold; positive impacts include generation of a revenue stream for the city council which will be used to fund future transport initiatives that will result in further

improvements to air quality. However, financial burden will be placed on those who are eligible to pay the CAZ charge. The impacts of this will be mitigated as much as reasonably possible via the implementation of a set of mitigation measures and exemptions.

It has been identified that the most significantly impacted protected characteristics are Age, Disability, Pregnancy and Maternity and Race., Some impacts are positive rather than adverse, particularly for Pregnancy and Maternity. The mitigation measures and exemptions help to address any adverse impacts. It has also been noted that there could be possible impacts for Gender and Religion or Belief particularly linked to those on lower incomes. It is anticipated that individuals with these characteristics, will benefit from the various exemptions and mitigations .

It is important to stress that the implementation of a Clean Air Zone will have positive health impacts on a number of characteristics, particularly Age and Pregnancy and Maternity. It will also help address health inequality associated with more deprived communities typically being exposed to more air pollution.

Evidence for these impacts has been drawn from extensive consultation, a distributional impact appraisal and a health impact assessment, as detailed above. A distributional impact appraisal and a health impact assessment in a combined document as per attachment.
