Commentary

Annual measure where an update has already been reported to Cabinet as part of the April to September 2018 (Quarter 2) Progress Update report.

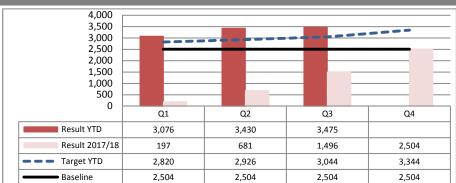

Reported one year in arrears. The pace of employment growth has slowed in the city and nationally in 2017. This is due to the slowing in economic growth between 2016 and 2017 linked to Brexit uncertainty. Employment growth in the city remains relatively strong, outperforming national growth in each of the last two years. If we look at employment growth over the last two years in total the city has added 23,000 jobs, a growth rate of 4.6% well above the England growth rate of 2.9%. During this period Birmingham was the second fastest growing core city for employment.

Benchmark:

1.3% increase 351,400 jobs 2017 v 2016

All England total

1.1.2 Birmingham citizens supported into education/training & employment through employment support activity

Commentary:

Exceeding Target - The number of Birmingham citizens supported into education/training & employment through employment support activity: - Includes the large Youth Promise Plus (YPP) project, which ended in July 2018 (interim activity continues in a limited capacity whilst an extension is being considered). Since April 2018 the YPP project has supported 971 young people into education/training or employment, bringing cumulative performance in Birmingham since April 2016 to 3,475 against a target of 3,044. This uplift was due to the completion of the YPP contracts in July, and young people moving into their education, training and employment destinations. Progress over the autumn slowed due to uncertainty over the extension's future, but the project extension is now in the final stages of appraisal with the Department for Work and Pensions (DWP), and approval is expected in the next few weeks. Cumulative performance of the YPP project to date, including Solihull Residents is 4,205 young people into education/training or employment." The outputs for YPP all relate to 15 to 29 year olds who are NEET (Not in Education, Employment or training). Moving forward outputs against this KPI measure in the future will also include participants from the new ESF 1.1 World of Work project which provides vacancy- linked training pathways to support adults (25 years or and above) into Employment & training outcomes.

At quarter 3, performance has exceeded it's year end target by 131 citizens

Outcome 1: Birmingham is an entrepreneurial city to learn, work and invest in

Preferred direction of travel: Bigger is better

Trend

Status: 17/18 **Trend**

18/19 19/20 20/21

Annual measure where an update has already been reported to Cabinet as part of the April to September 2018 (Quarter 2) Progress Update report.

UK Business Counts 2018 data was released in October. Between 2017 and 2018 Birmingham saw a decrease in SME business numbers of -2,450 (-5.5%). At a UK level there was a small increase of 3,765 (0.1%) in SME business numbers. Birmingham had the lowest growth in SME business numbers between 2017 and 2018 out of the 10 core cities

The 2018 fall in the stock of SME businesses in the city partly offsets a very large increase that was recorded in 2017. Because the SME data includes micro businesses (those employing fewer than 10 employees) it has become more volatile of late due to changing employment patterns (increase in self-employment). Virtually all of the change in business numbers from year to year is within micro businesses. If we look at the picture over two years the city has seen net growth in SME numbers of 2,120 (5.4%), above the UK growth of 4.1%.

1.4.2

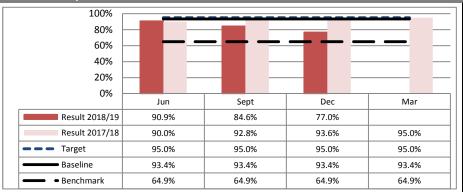

We have changed supplier at the beginning of the year and due to resource issues at their end, there has been no data provided to the Council. The data is still being collected and the data has now started to come through but there are various validation checks still required. It is anticipated that we will have data available for the period January to March 2019 and at that point we will be able to backfill the periods July to September and October to December 2018.

Year-end Target:

102

Benchmark:

2.1.1 Percentage of new Education Health Care (EHC) plans issued within 20 weeks, excluding exceptions

Commentary:

The variance from target accounts to 4 plans taking longer than 20 weeks to complete. The figure is skewed as less plans are completed in December and includes Summer exemptions working through the system. Special Educational Needs and Assessment Review team (SENAR) officers are carrying individual caseloads that are significantly higher than those of colleagues within the West Midlands region and permission has been asked for additional interim staffing. It is anticipated that the forthcoming review of Special Educational Needs and Disabilities (SEND) services, including SENAR, will begin to address these capacity issues and clearly define our priorities with regard to the relationship between timeliness and quality of Educational Health Care Plans (EHCPs). The most recent full yearly comparison for 2017-18 for Statistical Neighbours was 59.12% and for England was 64.90%.

The Written Statement of Action has been approved by the Department for Education (DfE) and the first monitoring visit went well with positive feedback. The next monitoring visit is planned for April 2019

95.0%

Benchmark: 64.9% England average

2.1.3 Children's Trust meeting or exceeding their performance targets Total of 15 individual indicators monitored separately as part of the contract

Commentary:

For the first time in over ten years children's social care services in Birmingham have been judged as 'requires improvement to be good', following the publication of the latest Ofsted inspection result. As well as being the overall outcome, all areas of the inspection were also judged as 'requires improvement to be good'.

This real progress is in line with continued improvements made during monitoring visits that have regularly taken place since 2016. Through commissioning work we are working to get more granular and better data on quality of provision

The monthly monitoring shows that - all 15 Key Performance Indicators (KPIs) are on track or within tolerance (with two indicators performing better than the target range)

England average

Commentary:

Improvement actions in place:

- Media company providing a 3 month targeted Facebook campaign #RoomForMe which has resulted in more social media traffic and an upturn in enquiries in October (furthermore it was National Adoption Week 17th-23rd Oct).
- Recruitment of a full time Marketing Officer. We anticipate that this and recruitment re-design should see an increase in adopter recruitment.
- Greater geographical reach from a 30 mile radius to a 50 mile radius.
- Increase in the number of Early Permanence Carers.
- Monthly Adoption Monitoring Meeting in each area.
- Weekly Permanence Advice Service clinics in each area of the city.
- Delivery of Child's Permanence Report writing training/workshops.
- There has been an increase in the number of information evenings on offer for prospective adopters to hear about adoption with Birmingham which has resulted in more ROIs.

2.1.5 Percentage of care leavers who are in Education, Employment, and Training (EET)

Commentary:

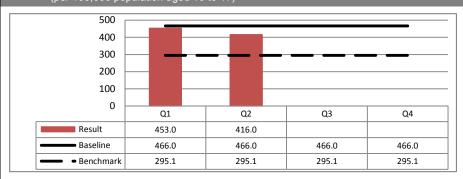

Performance continues to improve in this area. This is an area of good practice. We are performing better than statistical neighbours and nationally.

Work continues to maintain performance and to ensure that care leavers have the best possible opportunities to access education, employment and training.

2.1.6 First time entrants (FTEs) into the youth justice system (per 100,000 population aged 10 to 17)

Commentary:

Improving Trend -There is a lag of 2 quarters on the results. The number of first time entrants for the period July 2017 to June 2018 has reduced down to 416 from 453 in the period April 2017 to March 2018. This is an improvement of 8.1%.

Improvement actions in place:

Review decision making and guidance with Police and Crown Prosecution Service (CPS) for Community Resolutions and entry into formal youth justice system.

Greater analysis on those most likely to enter the system including those young people on Education, Health and Care Plans or with Special Educational Needs.

Support the Office of the Police and Crime Commissioner (OPCC's) commissioning of intensive mentoring across the City and a broader community and faith offer for young people not in the formal youth justice system but at risk of gang affiliation and criminal exploitation Identify funding sources to wrap support around those young people subject to community resolutions, those at risk of exclusion and Special Educational Need and Disabilities (SEND) young people.

2.2.1 Percentage of children achieving a good level of development - Early Years Foundation Stage

Commentary:

The percentage of children achieving the Good Level of Development (67.7%) has increased by 1.8% for 2018. This is in line with increases of our statistical neighbours whose performance has risen to 69.4%. This rate of improvement was greater than the national average increase (0.8%) leading to a slight narrowing of the gap to the national average of 71.5%

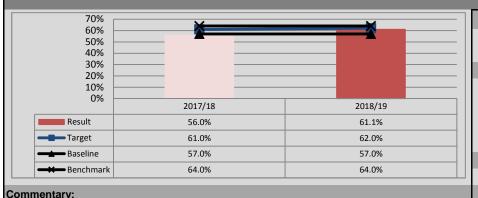

Birmingham Education Partnership (BEP) provide support to 55+ maintained primary schools through the BCC contract. These schools have regular visits from a priority partner to provide both support and monitoring of school improvement across the school. Furthermore 14 primaries (maintained and academy) are part of a successful strategic school improvement fund bid (value £500,000) who have each received £11,000 of support from a Teaching School over the last 4 terms. These schools focus on their area of school improvement need and so Early Years Foundation Stage (EYFS) is a focus for most of them. To support phonics in EYFS BEP signpost schools to the English hub who have funding to deliver these programmes. Further supporting is provided by Birmingham Nursery Teaching School Alliance who have a particular strength in this area.

2.3.1 The proportion of years 12 and 13 not in employment, education or training (NEET)

Commentary:

The Department for Education (DfE) have released the December 2018 figures by local authority The proportion of young people aged 16-18 who are NEET has fallen to 2.3% compared to 2.4% last quarter, and 2.6% nationally. The Core Cities average is 3.66%. This equates to 626 young people aged 16-18. The Not Known (NK) figure for December 2018 is 9.5% compared to the national average of 3.8% and Core Cities average of 5.09%.

The December figure is higher than where we wanted and the combined NEET/Unknown figure has been noted by the DfE. Some of this is due to dependencies on our neighbouring local authorities and out-of-area providers, however we have taken a number of actions to bring us back on track including:

- Chasing up any overdue data returns from Colleges and neighbouring LAs (there have been delays and some misunderstanding about General Data Protection Regulation)
- · Issuing 'not known' lists to the last known provider for them to follow-up
- Phoning up young people and parents and emailing where we have contact details

As a result of these actions, the provisional figure (as of reporting 24 January) for the 'not known' figure is down to 5.1% against a revised target for the end of January for 5.55% and so we are ahead with a week still to go. We are planning a series of mail-outs in partnership with the colleges which will commence in February and are exploring options for home visits to continue to revise this down further

NB Councils are measured on performance for NEET and Not Known, using the three month average (Dec-Jan-Feb).

Commentary:

Annual measure where an update has already been reported to Cabinet as part of the April to September 2018 (Quarter 2) Progress Update report.

The result relating to period 2017/2018 has not been achieved and is below target by 5% at 62%. The result is in line with our statistical neighbours at 62.5% The result is poorer than expected as there have been significant changes to the Children's Centres delivery as a result of the mobilisation of the new Early Years Health and Wellbeing contract in January 2018. This service is now being delivered by Birmingham Forward Steps. Children's Centres are an integral part of targeting the eligible children and assisting parents to access provision, and this has been negatively impacted by the structural changes that Children's Centres have been going through since January 2018.

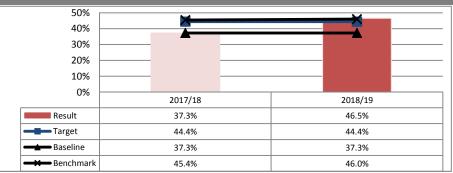

Local Early Years Networks are also an important mechanism for enabling Children's Centres and other local early education providers to work together to drive up participation and raise awareness in the local area – this has also been affected by the Early Years Health and Wellbeing service as the co-ordination of these networks was included in the contract. Information is shared on the children and families that are eligible from the Early Years team to the networks via the Children's Centres, however the networks have not been meeting during the last 10 months and this has significantly impacted on the awareness raising and parental engagement to stimulate the take-up of places by eligible children. The Children's Centres have now completed their change management process and Early Years Networks are now recommencing their activity. Plans are in place for Early Years Officers to support closely the Network steering groups, and Data Sharing difficulties have been resolved. Named Early Years Officers have been allocated to work closely with the Children's Centres, Early Years Networks and Nursery Schools to ensure that there is a priority focus for activity to support the 2 year old take-up. This will be monitored termly against the headcount.

Outcome 3: Birmingham is a fulfilling city to age well in

3.1.1 Proportion of people who use services who reported that they had as much social contact as they would like

Commentary:

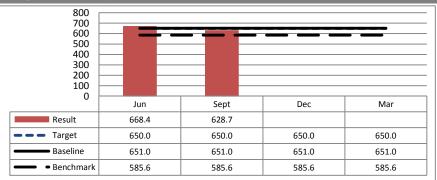

This represents a significant improvement in this measure from last year's survey, and a continuation of the upwards trend seen in previous years. In terms of our performance against other councils, this is a slightly above average score (46.5% against the national average of 46.0%), and places us within the second-best quartile at 66 out of 150 councils. We hope to maintain or improve our performance on this measure, due to the introduction of the three conversations model which happened after this survey was conducted. The three conversations model places an emphasis on the community as a source of support.

3.2.1 Reduced number of long term admissions to residential care and nursing care (per 100,000 65+)

Commentary:

Measure reported a quarter in arrears.

Performance on this measure has been brought back below target, and is now on track. The directorate continues to pursue a Home First policy from hospital, which aims to avoid residential and nursing home admissions from hospital wherever possible. The Three Conversations model has now been active on some teams for several months and is currently being rolled out to the rest of the service. This model takes people's communities as the starting point in meeting their care needs and connects them with opportunities that would previously not have been available through commissioned community-based care.

3.2.2 Reduced delayed transfers of care (DTOC)

Daily Average Delay beds per day per 100,000 18+ population - combined figure - Social Care only and Joint NHS and Social Care

Commentary:

Reported a month in arrears.

For the reporting period of November 2018, there has been an increase in the numbers of DTOC from 8.74 to 9.14 . There has been an increase in more complex cases within the hospital teams where patients require long term placements. This has seen an increase in residential placement delays. There is not an increase in nursing home delays in November but there have remained some delays due to complexity of needs There is a decrease in assessment delays. The Birmingham older people programme is prototyping a new model for early intervention. While it is early days, this may be having an impact on assessment delays. We do regularly see an increase in referrals during winter impacting on demand and capacity. We are utilising resources through additional winter funds to address this, via initiatives like the wrap-around service. This is a target set externally by the Department of Health and Social Care.

3.3.1 More people will exercise independence, choice and control over their care through the use of direct payments Uptake of Direct Payments

Commentary:

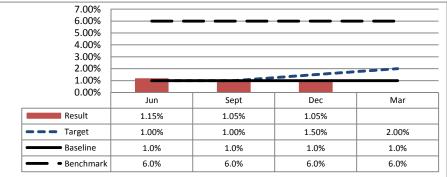

The proportion of eligible people receiving a direct payment has continued to increase month-on-month, and is broadly on track to meet the year-end target of 30%. We are continuing to follow a programme of co-production, partnership working, and encouragement from management, to complement the efforts from social work staff in meeting this objective. This programme and the efforts of those involved are making a large positive impact on this measure.

3.3.2 Proportion of adults with a learning disability in paid employment

Service users aged 18-64 with learning disabilities in employment

Commentary:

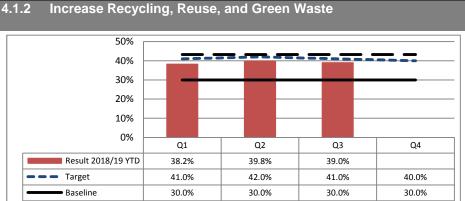

The position has remained steady over the last quarter, however it is recognised that this is against a rising target. The service remains committed to identifying and engaging with employers who are able to offer meaningful employment. There will be a renewed focus in 2019 on employment delivery. We have also identified:

- A lead to focus on Learning Disability (LD) employment and work with local employers.
- The need for a review of recording on CareFirst (our social care database) to ensure citizens with LD in employment are reflected the Lead is following up on this.
- Initial links with Job Centre Plus to progress LD employment offer.

Commentary:

Provisional result.

Benchmark

This is the percentage of the total waste disposed of that was reused, recycled or composted during the current financial year. The recycling figure includes recycled bottom ash which is in accordance with other LA's reporting. The estimated year to date figure of 39.0% is below the profiled target of 41.0% but within tolerance. In December the estimated in month recycling rate decreased to 35.0% from 41.0% in November.

43.2%

43.2%

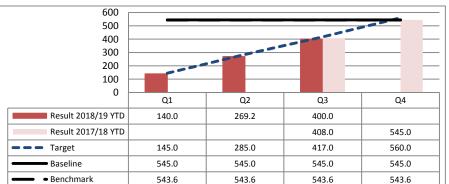

The year end target is achievable if there is a modest increase in recycling in the final quarter. However if during the current industrial action kerbside recycling is collected together with the residual waste then it would be unlikely that will be able meet the end-of-year target.

4.1.3 Reduced collected household waste – kg per household

Commentary:

Provisional result.

This is the average amount of residual waste collected directly from households. The estimated year to date figure of 400.0kg per household has met the target of 417.0kg per household. There is an estimated reduction of around 1.4% in the amount of collected household residual waste collected in the year up to December compared with the same period last year. Last year's figure for the period was 408.29 kg per household.

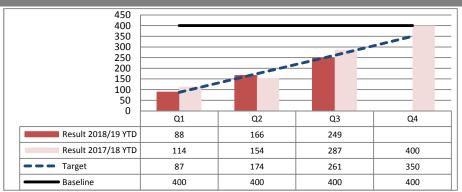

The year-end target is projected to be achieved, however If the industrial action affecting the collection services continues for any significant period of time leading to significant amounts of kerbside recycling being collected together with residual waste this would have a negative effect on this target.

4.2.4 Minimising the number and percentage of households living in temporary accommodation per 1000 households

Commentary

The overall proportion of households in temporary accommodation rose to 6.31 per 1000 household in the quarter. This reflects the national picture of increased demand from people presenting as homeless against a lack of affordable housing provision and number of properties. The overall strategy to reduce the number of households in bed and breakfast has been successful and the reliance on this type of accommodation and the number accommodated within it has fallen. The utilisation of Council owned stock and working alongside the private sector to obtain suitable properties has also had the impact of reducing bed and breakfast numbers. In addition, the Service is also converting Council owned properties into more appropriate supported living accommodation e.g. Barry Jackson Tower and Magnolia House.

The number of households placed in Temporary Accommodation (TA) has been steadily increasing since 2016 and continued to increase up until the end of quarter 3. It is important to note that the rate of increase is showing signs of slowing down. Through most of 2018 the number in TA per week increased by around 19 cases. Since the start of December there has been a reduction to between 4 and 8 per week with initial signs for January 2019 show this is continuing.

The service is unlikely to hit the target by year-end, however, the number of these households that are placed in bed and breakfast have significantly reduced from a high of 690 in the spring to only 380 in December 2018. The service continues to focus on prioritising prevention and is looking at the options to prevent admission into TA where someone is homeless on the day.

Q4

Commentary:

There are no further updates for this measure expected for the 2018/19 financial year. The service is constantly looking to increase prevention activity; shortly a Domestic Abuse Hub will be launched to provide specific support for women suffering domestic violence and at risk of, or

However, the reporting of this measure is reliant upon a new IT system which due to the significant changes from previous operations, staff are taken off front-line services incrementally from December - May for training; this will mitigate a reduced service. Due to the significant training required in order to fully implement this new system, performance figures will be available for the new financial year and data should be ready for May 2019. The Ministry of Housing, Communities and Local Government (MHCLG) is aware of these difficulties and therefore any information received thus far is heavily caveated.

91 Safeguarding Enquiries were completed in December, of which 9 involved allegations of domestic abuse - 9.9%In the last 12 months there have been 139 completed enquiries relating to this. Of these 89% achieved their expressed outcomes, 92% felt that they were involved, 91% felt that they had been listened to, 88% felt we had acted on their wishes, 82% felt safer and 82% felt happier as a result of our intervention.

5.4%

5.4%

5.4%

Commentary:

Above target (smaller is better) - In the period October to December 2018/19 the average unemployment proportion across the 10 Birmingham wards with the highest unemployment levels stood at 9.5%. The corresponding figure for the 10 Birmingham wards with the lowest unemployment proportions was 1.7%. Therefore, the gap between the 10 best and worst performing wards stood at 7.7% points in the period October to December 2018/19. The baseline uses the long term average gap for the corresponding quarter to avoid any issues with seasonal variation. Over the last 5 years the average gap in the period October to December between the 10 best and worst performing wards was 6.4% points. The gap in the period October to December 2018/19 is therefore 1.3% points higher than the 5 year average. The gap between the 10 best and worst performing wards has widened by 0.4% points between the period July to September and the period October to December.
